EXPERIENCE

Workato

Mar 2020 to Present

Design Manager, AI Products Lead | Mar 2025 to Present

- Shipped our two key 0-1 AI-native products (AI agent builder & Gen AI orchestration) in ~6 months, which repositioned us in the AI-first market. This included leading 6 designers and 2 researchers across concurrent workstreams.
- Currently manage 4 product designers (3 senior, 1 mid-level), and am one of two leads reporting to the Head of Design & Research.
- Partner closely with company executives, product management, and engineering leadership across 3 timezones (US, Singapore, Europe) to align strategy and execution on Workato's top AI priorities, negotiating tradeoffs across resourcing, timeline, and scope.
- Own design standards and governance for AI experiences platform-wide, reviewing work across teams to keep the AI experience consistent. Also, led the extension of the design system to the new gen-AI orchestration product as the platform scaled

Senior Product Designer, AI Products Lead | Apr 2023 to Mar 2025

- Sole product designer for AI initiatives, redefining our product strategy with PMs, dev leads and leadership. Under an aggressive timeline, this meant going deep into the underlying infrastructure to ground direction in what was technically possible, rounds of stakeholder discussions, and hands-on design iterations.
- I later expanded into a player-coach role, functionally managing three designers: a junior designer through late 2023, then a senior and a mid-level designer from mid 2024 onwards. This included running their 1:1s, project assignments, and reviews ahead of the official reporting changes, while continuing IC work to ship the Agentic and Copilot products

Senior Product Designer | Feb 2022 to Apr 2023

- Primary designer on Workato's core Recipe editor (low code automation builder), working directly with a dev partner to define and scope the problem

Product Designer | Mar 2020 to Feb 2022

- Worked on features across the platform including the low-code builder, dependency graph, security features like role-based access control, on-prem agents, BYOK etc.
- One of the main inventors on Recipe Difference Detection (2021, patent filed Feb 2023), a novel visual diffing system. I drove product and design, working in close collaboration with my UI dev counterpart.

CXA

User Experience Designer | Oct 2019 to Feb 2020

- Design for CXA's health and benefits platform, focusing on their telemedicine mobile application

DBS Bank

User Experience Designer | Jan 2018 to Sep 2019

- Co-led the end-to-end redesign of our bank's internal intranet as design and product owner, from research through delivery.
- Led 0→1 design for internal banking tools, transforming manual tax and finance processes into workflow applications.

Emerge Creatives Design Thinking Training

Design Thinking Workshop Co-Facilitator | Sep 2017 to Nov 2017

Heist Design Collective, +2 more

Internships: Design Research, Service Design, UIUX | 2-3 month stints from 2014 to 2017

EDUCATION

National University of Singapore (NUS), Singapore

Bachelor of Arts (Honours), Division of Industrial Design | Aug 2013 to Jul 2017

Ecole cantonale d'art de Lausanne (ECAL), Switzerland

Bachelor Industrial Design (Design Industriel), Exchange | Feb 2016 to Jun 2016

Raffles Institution Junior College, Singapore

GCE 'A' Levels | Jan 2011 to Dec 2012

PATENT

Workato

Design Patent: Software Recipe Difference Detection | Filed Feb 2023, USA
